SPC FLOORING

SPC Locking System

Stone Plastic Composite (SPC) – also known as stone polymer composite – is an improvement of luxury vinyl tile (LVT) and a worthy substitute for laminated floor.

Durability the rigid core formed through mixing limestone with PVC satisfies a tougher performance standard for higher traffic areas, and better resistance to dent and scratch. This new formula also improved its resistance towards temperature and climate change.

Innovation SPC is available in variety of colors and styles including natural wood, stone and carpet. Its cutting-edge properties – anti-termite, waterproof, fire resistance, and noise reduction – makes it an undeniable substitute to wood flooring.

Our SPC is made of non-toxic virgin PVC and is FloorScore® certified.
